

Driver assistance systems: more safety for all vehicle classes

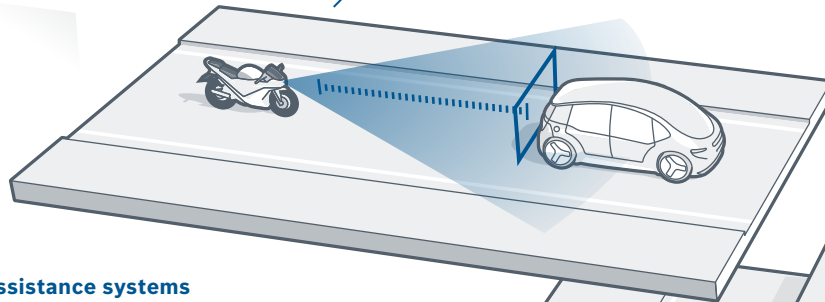

BOSCH
Invented for life

1

Assistance systems for two-wheelers

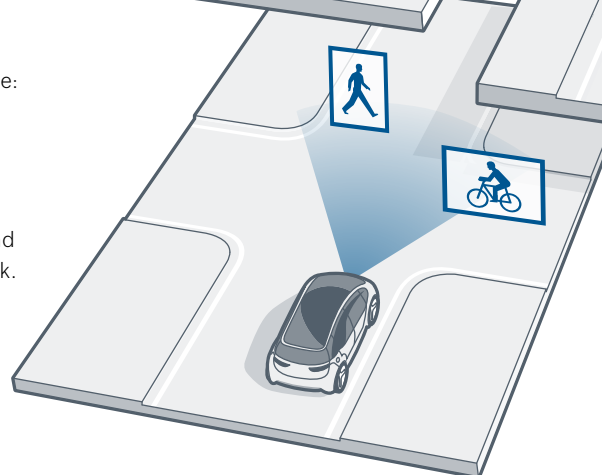

Driving fun, comfort and maximum safety: with blind spot assist, collision warner and adaptive cruise control, motorcyclists are better protected from the main causes of accident, i.e. inattentiveness, insufficient safety distances and excessive speed.

2

Assistance systems for cars

Safely navigating the urban jungle: Bosch successfully develops systems to meet the challenges associated with various traffic situations – for the protection of drivers as well as pedestrians and cyclists who are even more at risk.

3

Assistance systems for commercial vehicles

Reduced risk of accidents and efficient support: With video cameras, multi-camera systems, radar sensors and control units, Bosch develops systems for heavy commercial vehicles, forklifts, and even for urban rail systems and streetcars.
