

**BOSCH**  
Invented for life

# Human-machine interface

An attentive friend and companion  
in every situation

Connected mobility

Bosch turns the car into the third living space

## distraction-free driving

by supplying important information at the right  
moment

## personalized user experience

as the HMI learns about individual needs and  
responds to them ahead of time

- ▶ The Bosch HMI supplies all essential information when it is needed
- ▶ Many vehicle functions can be controlled by simple eye movement and gestures
- ▶ Talking directly with the car: Thanks to the HMI, systems like the navigation system can be controlled by using natural language – and the car answers in the same way
- ▶ The haptic display allows you to sense a variety of different surface patterns, which feel like real buttons – thus making orientation very intuitive
- ▶ The HMI even knows about personal needs and preferences, e.g. the taste of music, and adapts the whole vehicle accordingly – a place to feel good like in your own living room
